PROFESSIONAL EXPERIENCE

Senior Software Engineer

Armakuni

March 2025 – Present

- Built an AI-powered **Smart Call Assistant** integrating **ElevenLabs TTS**, **AWS Transcribe STT**, **Amazon Bedrock LLMs** and an **OpenSearch** knowledge base, with Google Calendar booking, availability lookup and real estate broker website scrapping, so the client could **answer calls and book viewings around the clock** without adding staff for support.
- Built a medical-domain **RAG** SMS agent on **Twilio** with issue escalation, tracking and follow-ups, giving patients **instant answers** and sending only unresolved cases to human agent, which **cut the support team's manual workload**.
- Created a text-to-image and image-to-image system for consistent game character generation using **SageMaker**, **ComfyUI** and **Qwen** image-edit models, using **LoRAs** and quantized models to cut processing time, so the client's art team could **produce on model characters quickly** instead of redrawing each variation for storybook.

Software Engineer

DosePack (Meditab)

December 2022 – March 2025

- Designed and built **REST APIs** that streamlined business workflows and cut response times by **50%**.
- Automated database migrations across environments with version control, cutting deployment time by **40%** and letting the team **ship releases faster with fewer migration errors**; published the tool as a **PyPI** library.
- Built **ETL pipelines** for data pre-processing, feature engineering and validation, plus daily performance statistics that gave stakeholders **data to base decisions on**.
- Developed real-time features over **WebSockets** (live updates, dynamic dashboards, notifications).
- Implemented authentication with **JWT** and **RBAC**, and a single sign-on (**SSO**) solution using **OAuth 2.0** scopes, giving the client **secure, role-based access** with one login across its apps.
- Designed an optimized **SQL** database that improved storage utilization and backend performance, **keeping the app fast** as data grew.
- Optimized compute-heavy algorithms for **pack-filling slot customization**.
- Built a centralized pharmacy traffic manager: a middleware service that applies filling rules across multiple US pharmacies and filling services, **balancing workload** so orders were filled more efficiently.

PROJECTS

Tradesperson Recommendation | FastAPI

- Used **Claude on Bedrock** to tag job quotes and tradespeople against a **trade taxonomy** and **rank tradespeople** per quote by tag overlap, with background scoring and cached assessments, so customers get **matched to the right trade**.

Ad Recommendation | XGBoost, MLOps

- Built an ad recommendation model to predict higher **CTR**, backed by an **MLOps** pipeline.

Fraud Rule Optimization | FastAPI, Optuna

- Used **Optuna** to search trillions of detector-score permutations for the business rule that catches the **most fraud** with the **fewest false positives**.

Image Generation | Stable Diffusion

- Generated images with **Stable Diffusion**, fine-tuning with **LoRAs**, **VAEs**, **CUDA** and checkpoints.

EDUCATION

Bachelor of Technology

Dharmsinh Desai University, Nadiad
2019 – 2023 · 8.72 CGPA

TECH STACK

Python, Django, FastAPI, Flask, TypeScript, Node.js, JavaScript (ES6+), Express, Prisma, HTML, CSS, REST APIs, Git, Docker, CI/CD, AWS, Bedrock, SageMaker, Vertex AI, Vector DBs

ACHIEVEMENTS

- **Google Cloud Certified** Professional Machine Learning Engineer.
- **Interviewer** for campus placement drives and senior roles at Armakuni.
- **Training and Placement Coordinator** at DDU (2023).
- **Coordinator** for DDU NSS club activities.
