SUMMARY

Senior Software Engineer committed to delivering high-quality projects and exceeding expectations. Proven ability to optimize processes, automate tasks, and deliver secure, efficient, and user-focused solutions that drive business success. I also love to try out quirky UIs and get updated with latest tech news. I am GCP certified ML professional engineer

SKILLS

- **Development:** Python, JavaScript, TypeScript FastAPI, Django, SQLAlchemy, MySQL, PostgreSQL, Redis, RabbitMQ, Celery, WebSockets, React, Next.js
- **Deployment and DevOps:** Kubernetes, Jenkins, Docker, ArgoCD, Grafana, LogQL
- **AI/ML:** LangChain, LangGraph, VectorDB, Stable Diffusion, PyTorch, LoRA finetuning, CUDA, VAEs, LLM fine-tuning, XGBoost, Decision trees, hyperparameter tuning
- **AWS:** EC2, S3, ECS Fargate, Bedrock, Sagemaker, lambda, SQS, AWS connect, AWS transcribe, CloudWatch
- **GCP:** VertexAI, DataFlow, KubeFlow

PROJECTS

- **Ad recommendation:** Ad recommendation model to predict higher ctr XG Boost and MLOps pipeline.
- **Smart Call Assistant:** AI-powered call system with ElevenLabs TTS, AWS Transcribe STT, Bedrock LLM, and OpenSearch. Features Google Calendar booking and real estate tools.
- **Stable Diffusion:** Developed a project using Stable Diffusion models to generate images. Gained hands-on experience in generative AI concepts, including LORAs, VAEs, CUDA and checkpoints, enhancing my understanding of image generation workflows and model fine-tuning. This project deepened my knowledge generative AI techniques.
- **Consistent Character Generator:** Text-to-image and image-to-image system for consistent character creation using SageMaker, ComfyUI, and Qwen models. used LoRAs and quantized models to reduce processing time
- **Medical RAG SMS Chatbot:** Healthcare chatbot using Twilio with issue escalation, tracking, and follow-up capabilities.
- **AI Movie Recommendation:** movie recommendation using opensource GenAI APIs.
- **Fraud detection business rule optimization:** Used optuna to reduce trillions of permutations to find best combination of detector scores for business rule which can catch max frauds with min false positives

PROFESSIONAL EXPERIENCE

Armakuni

SR. SOFTWARE ENGINEER

Mar. 2025 - Present

- **Smart Call Assistant:** Developed AI-powered call assistant integrating **ElevenLabs TTS**, **AWS Transcribe STT**, **Amazon Bedrock LLM**, and **OpenSearch** for knowledge base. Implemented features for Google Calendar booking, availability lookup, and real estate broker website building.
- **Medical RAG SMS Chatbot:** Built medical domain RAG chatbot using **Twilio** with comprehensive issue escalation, tracking, and follow-up capabilities for healthcare communication.
- **Gaming Character Generation:** Created text-to-image and image-to-image generation system for consistent character creation in gaming industry using **SageMaker**, **ComfyUI**, and **Qwen image edit models**.

DosePack (Meditab)

SOFTWARE ENGINEER

Dec. 2022 - Mar. 2025

- **API Development:** Designed and implemented RESTful APIs to streamline business workflows, reduce response times by 50%, and enhance system interoperability.
- **Migration Automation:** Automated database migration processes, reducing deployment time by 40% with version control across environments. Created and published PyPi library for the same.
- **Data Engineering and Analytics:** Built ETL pipelines for **data pre-processing, feature engineering and validation** to support analytics. created daily performance statics for stakeholders
- **Real-time Systems:** Developed real-time solutions using **WebSockets**, enabling bi-directional communication for features like **live updates, dynamic dashboards**, and **notification services**.
- **Authentication Systems:** Designed and implemented secure authentication systems using token-based mechanisms (**JWT**) and role-based access control (**RBAC**). Developed a seamless single sign-on (**SSO**) solution with **OAuth2.0 scopes**.
- **Database Engineering:** Enhanced backend performance by designing a well-optimized SQL database, significantly improving storage utilization and system efficiency.
- **Algorithm Optimization:** Optimized computationally intensive algorithms for **pack-filling slot customizations** and workflow optimizations.
- **Centralized pharmacy traffic manager:** Designed and implemented middleware service to manage optimized filling with set of rules for multiple US based pharmacy and filling services to improve their efficiency.

ACHIEVEMENTS

- Training and Placement Coordinator at DDU (2023).
- Interviewer for campus placement drives and senior roles at Armakuni.
- Coordinator at DDU NSS club activities.

EDUCATION

Dharmsinh Desai University

B.TECH

CGPA: 8.72/10

Nadiad, Gujarat

July. 2019 - May. 2023
